

Find your way out of the EDI wilderness and back into the real world of business to business eCommerce

megaXML®

Benefits:

- ❖ Seamless integration of Microsoft Dynamics, Oracle, IBM and SAP with EDI and XML
- ❖ Maximize your operational efficiency & improve profitability
- ❖ Software-as-a-Service (SaaS) on Cloud, Service Oriented Architecture (SOA), Real-Time Solutions.
- ❖ Capture significant savings and reduce errors through automation
- ❖ Increase productivity and reduce time to market
- ❖ Improve customer satisfaction by efficiently responding to their evolving EDI needs
- ❖ Experience a simplified, turn-key solution

If you use EDI, or are contemplating it for business-to-business eCommerce, you know the benefits—faster order processing, fewer errors, and consistency of communications—all on a web browser system. Chances are you also know the challenges—costly upgrades and maintenance, lack of flexibility, and difficulty accommodating unique client formats. Even finding EDI technical support can be costly and time-consuming.

The wave of the future

Now there's a solution to make EDI processing easier: MegaXML, a business logic interface that will improve your business processes. MegaXML takes maximum advantage of technologies such as XML and secured Internet to provide flexibility in managing the rigid nature of EDI data.

Using XML, the language of B2B integration, MegaXML accepts documents conforming to multiple syntax standards—EDI, XML, even flat file—and delivers output in any desired format. Suddenly, your front-end and back-end systems are *flexible and adaptable* to meet any unique client requirement. MegaXML improves any EDI business transaction: Purchasing,

Advanced EDI and XML solutions for B2B eCommerce

megaXML

Invoicing, Planning, Logistics and Financials. You can offer your clients better service by efficiently accepting and sending data in any format they choose.

Streamline your B2B eCommerce process for Operational efficiencies

Imagine your EDI environment suddenly made simple; no need for constant software revisions, no software installation headaches and no exorbitant maintenance fee. MegaXML is so easy to use, you can even reduce staff or external consulting support.

“Single Source has benefited with the MegaXML solution in that it provides us with a full-time employee equivalent service. Knowing that your group is monitoring our data exchange allows our IT department to focus on important internal projects. Your solution provides us more time to focus on creating efficiencies in our core IT infrastructure which will keep our company at the cutting edge of technology.”

—Single Source, Director,
Information Technology

Adapts to your environment

Because MegaXML provides a process to ensure your data is “software neutral,” you won’t need to invest in updates to back-end systems every time your trading partner modifies EDI specifications or implements a new version. Through MegaXML, your business processes are instantly adaptable to the changing EDI environment and evolving client needs.

Transact with your community of business partners, 24x7 in an environment that meets your business requirements. For small to large businesses, MegaXML provides marshaling of EDI data between front-end and back-end legacy systems and ERP. If you have high transaction volume and performance requirements, MegaXML provides *linearly scalable* EDI translator for lightning speed throughput.

For small to mid-size businesses, MegaXML serves as your facilitator for web-based EDI processing. Looking to outsource EDI? Task Performance Group can serve as your one stop outsourced, secure data exchange partner. We are an experienced application service provider, enabling you to access your trading partner transactions over the secured Internet.

Technical Partners

We are proud to have a platform built on the best technology partnerships: Microsoft, Oracle, IBM and SAP. We have been certified by Microsoft since 1994. And our in-house technology experts ensure superior service during and after MegaXML implementation.

Want a customized solution? No problem

MegaXML's design architecture is completely object oriented. It utilizes C Sharp and .NET Class Libraries for a variety of objects. We can apply your own business logic to customize these objects. The infrastructure of the product remains the same, with your customized business logic layer incorporated.

Experience counts

Task Performance Group has been providing integrated business-to-business solutions for over 20 years. Our clients come to us for advanced automation for multiple syntax based document exchange solutions; and stay with us because of solid foundation on multi-server Cloud platform and customer-oriented processes.

ISV/Software Solutions

The MegaXML Software Suite for B2B eCommerce

MegaExchange: The outsourced solution that enables small to mid-size suppliers to conduct B2B eCommerce using Internet without any EDI expertise or expensive hardware.

MegaExchange-MCE: Enterprise version of EDI on Internet. SaaS based on Cloud platform solution that uses Web Portal, allowing mid-size to large companies to send and receive orders, invoices and other documents between their suppliers. MegaExchange-MCE works solely on Internet and can eliminate VAN charges resulting in tremendous savings.

MegaXML-MCA: The EDI to ERP interface that accepts inbound EDI and XML data and orchestrates it seamlessly to the back-end ERP system—providing a complete collaboration with shipping, warehousing and financial system activities. Additionally it delivers data from ERP to appropriate trading partners in variety of formats such as EDI, XML and Flat file. MegaXML-MCA provides seamless integration with Microsoft Dynamics Great Plains®, SAP®, Oracle®, JD Edwards®, Sage® (MAS90, 200, 500).

MegaXML-RT: Real Time B2B E-commerce Cloud based solution directly integrating with Supplier Exchange. MegaXML-RT offers greater integration and efficiency in the supply chain by connecting buyers and suppliers in real-time. Suppliers' inventory is examined and orders are executed within seconds in Real-Time. Supply chain data is exchanged using secure SSL certificates, through which communications are fully secured via encrypted XML data for use with ERP and legacy systems.

MegaXML-MPE: The high volume and performance IBM iSeries (AS400) and IBM Mainframe EDI translator replacement software. Its advanced technology infrastructure makes use of Distributed Processing, Hyper-Threading and .NET framework features to achieve blazing speed for high volume transaction processing. This is a truly linearly scalable business model that accommodates expanding transaction volume by adding PC servers and without changing software.
